Summary Backend-focused Software Development Engineer with 2+ years of experience in Python, automation, APIs, cloud infrastructure, and scalable production systems. Experienced in building automation workflows for applications and infrastructure using Django, FastAPI, Celery, Docker, AWS, DigitalOcean, Git, and SQL. Hands-on with monitoring and observability using Kibana, troubleshooting production systems, and optimizing high-performance APIs. Experience integrating Generative AI and LLM APIs, including OpenAI, RAG, and agentic AI workflows. Strong problem-solving skills with cross-functional delivery experience.

Experience

Software Development Engineer 1 (SDE-1) <i>Instahyre</i>	Dec 2024 – June 2026 <i>Noida, Delhi</i>
- Owned the Jobs module end-to-end; built Magic Boost, an automated recommendation engine for candidate-pool expansion, and Market Signal, an LLM-powered feature using the OpenAI API to generate JD-aware recruiter insights and improve matching workflows. - Scaled critical Python APIs from 750ms to 120ms average latency by replacing Django ORM with optimized raw SQL, reducing overall API response times by 30% and improving application performance. - Built an automated reporting pipeline aggregating OpenAI-generated recommendation outputs per recruiter JD into weekly management reports for system performance analysis and troubleshooting. - Shipped Fine-Tune, a production Generative AI feature using the OpenAI API to refine candidate searches through AI-driven signals, improving candidate relevancy by 70% and candidate pool size by 40%.	
Back End Developer <i>Xtage</i>	May 2024 – Nov 2024 <i>Gurugram</i>
- Solely built the backend for Pearch, a Shopify collection-sorting plugin with 1,000+ installs, including an ML-assisted ranking engine combining rule-based signals with configurable parameters. - Automated asynchronous application operations with Celery queues; optimized APIs to handle 200–300 customer visits/hour and integrated Shopify subscription billing APIs for recurring pricing workflows. - Deployed and maintained application infrastructure on AWS and DigitalOcean using Docker and Nginx; collaborated with frontend, UX/UI, and PM teams and delivered API documentation for cross-functional integration.	
Python Intern <i>Callisto Infotech</i>	Feb 2023 – Apr 2023 <i>Remote</i>
Built full-stack web applications using the MERN stack and developed REST API endpoints with Django REST Framework, JWT authentication, ORM models, and Tailwind CSS components.	

Projects

Fasfas Django, AngularJS, React Native, Celery, Elasticsearch fasfas.in
Built a full-stack fashion e-commerce platform with a Django REST backend, AngularJS web frontend, and React Native mobile app; implemented AI-powered recommendations, Elasticsearch product discovery, and Celery-based asynchronous order processing and notifications.
mcp-phabricator TypeScript, MCP, Phabricator API GitHub
Built an open-source MCP server enabling AI agents to review code diffs with stack-aware prompts, generate task summaries, and automate Phabricator workflows; published on Smithery and installable via Claude Code.
Rune Go, Ollama, RAG GitHub
Built a Go CLI extending local LLM capabilities through Ollama with a RAG pipeline for semantic search, persistent conversation context, and offline AI-assisted querying.

Technical Skills

Languages: Python, JavaScript, TypeScript, SQL, C++, Go Frameworks & Tools: Django, FastAPI, Flask, Node.js, React.js, Next.js, AngularJS, Celery, Elasticsearch, Tailwind CSS, REST APIs AI/ML: Generative AI, Agentic AI, LLM Integration, Prompt Engineering, RAG, Ollama, OpenAI API, Gemini SDK, Vector Search Infrastructure: AWS, Docker, Nginx, Linux, Kibana, PostgreSQL, MySQL, Redis, DigitalOcean, Cloud Infrastructure Dev Tools: Git, Postman, Neovim, Phabricator, Arcanist Libraries: pandas, NumPy, Matplotlib

Education

Bachelor of Technology in Information Technology <i>Krishna Engineering College (AKTU)</i>	2020 – 2024
CGPA: 7.54	
XII (CBSE) <i>Navyug School, Laxmi Bai Nagar</i>	2019
CGPA: 8.7
